

GIL Cataloging Team Agenda

August 10, 2017

AGENDA

1. Marcive GPO Update – Hallie Pritchett

Hallie Pritchett, Regional Depository Librarian, joined us to provide an update to GPO load process. There are 24 Georgia libraries in the FDLP 15 of which are in the USG. Two of these, the USG Law Library, which uses Millennium, and Georgia Tech Law, which is not using the Network Zone, are excluded from this process.

UGA is the Regional; they receive all of the publications in all formats. Using the MARCIVE service to provide the cataloging records is desirable. GALILEO is paying for the consortia subscription to MARCIVE. There are additional services with extra costs available to Depositories. Two libraries (UGA and VSU) are pursuing on of these services with the receipt of barcodes.

Testing of loads for electronic records has been successful. July still needs to be loaded and once done, will be up-to-date. Electronic records will appear in the Institutional Zone for all USG libraries not just those that are FDLs. It is believed many of these resources would be of value to all patrons and if not wanted in search results could be “faceted out” keeping only the content that is wanted. An example from the VSU catalog:

1 Results for Valdosta State University Sorted by: Relevance ▾

 ☆ **Effigy Mounds National Monument revised draft general management plan, environmental impact statement**
United States. National Park Service, author.
Denver, Colo. : National Park Service, U.S. Department of the Interior 2011

[Note: *Request through ILL* and *Get It* tab are known issues. A solution has been found and has or is being put forward to the OPAC committee to address it.]

Testing of the Shipping list service is still ongoing. On a weekly basis, stub records (brief records) are received by MARCIVE and loaded into the Network Zone. Holdings records are pushed to the IZ for those institutions selecting the title. MARCIVE adds a temporary number to the 035 field, which is used as a matching point for monthly loads of full records. Libraries do not have to do anything with these records. Those libraries subscribing to the Shipping List Service from MARCIVE can process their receipts. Those depositories that chose to not have the Shipping List Service will have to wait until the monthly loads to process their receipts. Most of the latter depositories do not select a large number of item numbers and would receive a very small amount of tangible resources.

Sean described the process of the loads. They are all loaded suppressed in the NZ. Sean runs a job to unsuppress them. Selectives will have to unsuppress their IZ holdings once they are processing their receipts.

Hallie commented many people are asking about weeding. Selectives must waiting until the testing for the Shipping List Service is complete and everything is in production.

Hallie also commented that there is a list to keep the depositories abreast of developments USG Federal Depository Libs (USGFDL-L@LISTSERV.UGA.EDU) which is for all the coordinators and anyone else that is deemed necessary to be a subscriber. The annual meeting of depository coordinators also serves in this function as well as contacting Hallie directly.

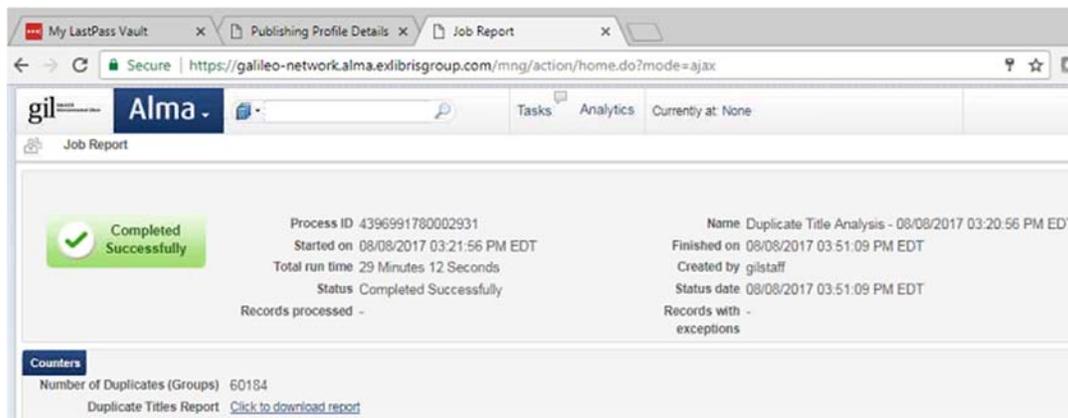

2. Next Two meetings

Debra will be on vacation for the next two weeks. Kelly Holt commented in chat that she will hold the meetings in Debra's absence. Send any agenda items to Kelly.

3. Updates for GIL – Bill, Sean

Sean and Bill gave an update on the MultiMatch issue. A response was received from Ex Libris. The bad news is that this cleanup will be a manual process. In addition, the

Duplicate Title Analysis run by the GIL staff now shows 60184 multimatches. The reason for this increase will have to be looked at but is believed to be due to matching on any number in the 035 field, which includes the migrating Voyager bib ids.

Sean will send out a link to G2CAT to the Duplicate Title Analysis report, which has been populated to Google Sheets. Running reports on the various OCLC prefixes may be the solution to paring down the large number of records to include only those that need to be addressed.

4. NZ Record no longer matches WorldCat master – Need to notify libraries with holdings

Some Master Records in OCLC have changed enough that USG libraries with the title may have a different edition (For example, a change in the date. Julie stated in chat that libraries with the title may need to review their copy and move the holdings to the correct edition if different. These records would/could also be overlaid with the nightly loads.

A primary question is in how to communicate to other libraries that this change in OCLC has occurred. G2CAT is the community vehicle for such notifications. Bill stressed that there needs to be sufficient list subscriptions from all USG institutions on these lists. The Institutional Leads would need to provide the names of those that would be designated for not just Cataloging, but Acquisitions, Fulfillment, etc. to insure relevant information is distributed. It was also noted by Guy in chat that the responsibility should belong to the Cataloging Coordinator.

Robin brought up the question of whether we would have a USG Basecamp. Bill replied that it has been discussed but is not as straightforward as one would hope.

Some changes may be minor in nature. Robin will develop guidelines on dealing with minor variations.

5. Lost/Missing Items in Voyager vs. Alma – Miriam

Miriam provided insight in how Lost/Missing items migrated from Voyager. She will send out a breakdown to G3CAT. Voyager Statuses do not translate into Alma due to there being no equivalent statuses. Those titles in Voyager with a Lost, Missing, Damaged, or Withdrawn status that are not associated with a patron record were migrated as: Technical Migration. If the title was associated with a patron record migrated as Lost if they had the following Voyager status of Lost-Library Applied. Lost-System Supplied and Claims Returned were also marked with the Lost status.

The document sent by Miriam on G3CAT has useful information and will be placed on the Training Wiki once a location is determined.

6. Withdrawn Procedures – Shelley & Robin

[Not time to discuss]

7. Local Fields and Consortia Use

a. 990 – Reserves

[No time to discuss]

8. OCLC Data Sync

a. Records to Include

b. Records to Exclude

[To be discussed via email]

- c. Insert a field or overlay (current OCLC number)
 - i. Makes a difference in what can do to records for 90 days

Bill pointed out that a better solution for the Data Sync needs to be explored as a 90 day down time was not desirable. It was believed that this might be done locally with the MMS IDs and correct OCLC numbers. Sean has created as case to see how this could be done. The Data Sync with OCLC has to be done all at the same time and cannot be broken out.

9. Cataloging Team SubGroup - Debra

- a. Cataloging Technology Liaisons (Miriam, Julie, Guy, Robin) “to bridge gap between needed cataloging expertise and needed Alma technical expertise to implement changes for all 27 USG institutions”
- b. Volunteers (Miriam, Julie, Guy, Robin, Sean, Bill)
- c.

Proper name to be discussed on G3CAT

10. Other Questions/Concerns/Updates

[Other topics to be discussed on the list]

Submitted August 10, 2017 – Guy Frost, Recorder
