## HONORS DAY PROGRAM SET FOR MAY 6

### Mercer President Harris Delivers Speech Over 150 VSC Students To Be Honored

Rufus C. Harris, President of Mercer University, will be the featured speaker at the annual Honors Day program on May 6. The program, which will begin at 11:15 am in Whitehead Auditorium, will recognize over 150 students.

VSC President S. Walter Martin will present awards to the students, including the coveted Annie Potts Hopper Award which goes to the senior who stands highest academically and best exemplifies the traditions of the college.

Other honorees will receive departmental and special awards.

Other honorees will include Marga and Mac of the Junior

and Senior Colleges. These awards are given to the men and women in both the upper and lower divisions of the college who most exemplify the best all-around students.

Dr. Harris is a native Georgian who has attained leadership in southern and

### Sanders Emphasizes Public Opinion In Control Of Pollution Problems

by Kay Williams

Sanders spoke April 20 at 1:30 pm in the Little Theatre of the Fine Arts Building. Sander's visit was jointly sponsored by the Young Democrats and the Students for Sanders Committee.

"It is only by educating the people and mobilizing public opinion that we can bring about an effective governmental response to the problems of our environment or any other political problems of the day. Our environment is a direct reflection of our attitudes and our thinking and the strain we have placed upon our environment calls for radical changes in the way we think of ourselves and of our world. Therefore our most urgent need as I see it is a new attitude on the part of our citizens and our elected officials," according to Carl Sanders, former governor of Georgia and apparent contender in this year's gubernatorial race.

"The life-blood of state government must have a transfusion of youthful ideas, of new and innovative thinking, if we are to formulate an effective governmental response to the new problems which have arisen in recent years, problems such as drug abuse, education, cleaning up the environment, and coping with urbanization," said Sanders.

"While it's saddening to watch the chaos that results from some of our radical student behavior, no thinking human being wants to return to the politically apathetic, socially uncoconscious, college atmosphere of yesterday.

"You as students are in a better position than ever before to influence and direct constructive political change," he said, pointing out that almost 50% of Georgia's voting age population under thirty.

"It is imperative that we bring the technological world of in-

dustry and business into harmony with nature and with the ideals of mankind. Indeed, without sounding like a science fiction writer, I think our very existence depends upon it.

"In Georgia, we are luckier than many of our sister states to the North. Technology has done far less damage here than in other places. Time is on our side for the moment, and we have a unique opportunity to control our environmental destiny and to be a model for the rest of the nation."

"I believe that the 70's will be remembered as the decade when man began cleaning up his environment, when man began to apply technology to clean up what it fouled up. This use of technology is as much a part of the immediate answer to our problem as political action," said Sanders.

"I believe that the state has primary responsibility for pollution control, and state pollution agencies should be consolidated into a Department of the Environment."

"It would have the authority to enforce the laws vigorously against big industry as against small industry," explained Sanders.

continued on page 4

### EARTH-DAY FEATURES DISPLAYS, FILMS, LECTURES

Earth Day has arrived! The National Environmental Teach-In is being observed today by thousands of colleges and high school students across the country.

The goal of Earth Day is to educate the public to the ever-increasing problems of the environment.

A group of students, faculty, administrators, and area citizens have worked for several weeks on plans for the Teach-In.

"Pollution is a problem created by the 'older generation,' but it is now our problem. We are going to have to live with the effects of pollution," said Kirk Rivenbark, student coordinator of the Earth Day committee. "We must start doing something about pollution now; tomorrow may be too late."

"Area industries have been extremely cooperative in helping us plan events for the Teach-In at VSC," he said.

Two students, Scott Chase and Gordon Bass, both of Alexandria, Virginia, have been busy promoting student interest in the problems of the environment.

"I am from a northern, urban, industrialized area. I have breathed, smelled touched, ingested, digested and rejected fo-

ul air and water," said Bass. "Most students from rural southern towns have never experienced such things and need to be educated to the dangers of pollution."

"The root of all environmental problems is overpopulation. It is going to get to the point where we have massive famines which will lead to social collapse which could easily lead to nuclear warfare," said Chase.

"Girls of college age should be concerned with the fact that they might bring children into the world who won't live to reach adulthood," said Bass.

"Earth Day is a tremendous opportunity for the campus to get together for a common cause, regardless of what our politics or morals are, seeing as how we're all in the same boat," Chase continued.

A schedule of the day's events are as follows:

Scott Chase will speak on pollution at 10:10 by the pile of junk in front of the Student Union. A polluter-of-the-month award is also to be presented.

At 11:15 a film entitled "Water" will be shown in the projection room.

At 12:20 discussion on pollution in this area will be conducted by officials of the Low-

ndes County Department of Health in the Little Theatre slides will also be shown.

At 1:25, Dr. Bernard Bechtel will lecture on the population and its relationship to pollution. (Little Theatre).

At 2:30 W. G. Meredith of the Georgia Water Quality Control Board in Atlanta will lecture in the projection room of the Student Union.

At 3:35 students are asked to meet in Brookwood Park for clean-up. Trash is to be piled up for passers-by to see.

Throughout the day slides will be shown in the lobby of the Student Union, depicting pollution in Lowndes County.

A taped panel discussion will be aired on WGAP at 8:30pm. Discussing environmental problems will be Mr. Ricks, Dr. McMurry, Frank Golden (Lowndes County Health Department), Harley Langdale, Jr. (Langdale Company), Dr. Connell, and Larry Murdoch.

Pollution exhibits which would state recognition in the Science Fair will be on display in the Student Union.

Exhibitions on pollution control, provided by the Langdale Company and Owens-Illinois, are also on display on campus.

### Of Regents Approves 5-Day, 7-Day Meal Plans

by Kay Williams

of Regents recently approved plans to begin summer

be a 5-day plan which three meals per day Monday, Thursday, and breakfast Friday.

an will also be offered, be equivalent to the pre-

plan will cost \$128 per the 7-day plan costing \$158.

to J. Marion Franklin, Kilary enterprises, three plans to offer only the 5-day summer quarter.

ers, the cafeteria will be stands, but the Student bar will be used to serve remains on campus during

as in 1950 amounted to

\$105 per quarter. In twenty years the rate increase charged for meals has not kept up with the increased cost of food and labor," said Franklin.

He further explained that establishing a plan in which students paid for lunch and dinner would mean a savings of only about \$2.50 per quarter. According to Franklin this is because breakfast food is much cheaper than food for lunch and supper.

Also effective summer quarter there will be an increase in board for on-campus residents.

Rooms in Langdale and Georgia Enterprises will rent for \$110 per quarter. Likewise, Ashley, and Reade will cost \$100 per quarter.

Brown, Lowndes, and Hopper Enterprises will rent for \$100 per quarter. Hall costing \$80 per quarter.

According to Sam Brooks, controller, Ashley and Converse will be closed for renovation.

## Environmental Action Essential- Even After "Earth Day" Ends

There are many opportunities on campus today for student, faculty, and administration to become better educated to the overwhelming problems of the environment.

Lectures, discussions, and other activities are scheduled throughout the day. If it should be impossible to attend a scheduled event, there are science fair exhibits, slides, and bulletin boards showing ecological problems.

Education is the first step to solving the many problems now facing man. Earth Day is a good opportunity to educate people at VSC.

Do not, however, allow the process of education to end here. Next should come the education of the people of Valdosta and Lowndes County, and the eventual education of the entire state.

The next step to solving the problems of the earth is action by political officials to create, and enforce pollution regulations.

Do not let Earth Day be the only day of interest in ecological problems. Only through continued interest and work will the many problems be remedied. Do not wait for others to solve the world's problems. Act now; your survival may depend on it.

**Guest Editorial**

## Ecological Living Requires New Life Styles

WASHINGTON-(CPS) Many environment groups in this country are not only interested in moving towards the solutions to pollution, but they're moving towards "doing life right." They realize that the crisis caused by pollutants are "natural backlash" and provide concrete evidence of the breakdown of our ecological consciousness.

To put it simply, people are looking for an ecologically sound way of life because they want to start living that way now.

This ecologically sound way of life means not only that we live, managing and caring for the things around us, but more generally, we live knowing with intelligence-love that all things are interdependent, and live in reverence for this ever-changing interdependency.

A certain spirituality rises up from living ecologically; when you live as-nature, with no man-made, min body separation. Sometimes this spirituality rises

up into words, and we've seen lightning glimpses of this spirit of nature in the writs of close-to-earth people: Gary Snyder, Aldo Leopold, John Muir, Henry David Thoreau, Alan Watts, and Walt Whitman among others.

Human ecology is a total way of looking at life. It not only gives insights into sound economic systems, community organizing, moral science, architecture and space arrangement, but it blows us into a refreshing spiritual stream-of-things that is not all separate from any other of these areas. Ecology is far past specialism--it's a way of looking at the realtions of wholes. In the earth household, every room the living room and together they make up the larger living room. The human ecologist streams up from a complex of roots--in feeling the natural language, he becomes multilingual.

Some have seen that many of the primitives and mystics are into the right life-things more than our culture has given them recognition for.

Snyder points out in Four Changes that:

"It seems evident that there are throughout the world certain social and religious forces that have worked throughout history toward an ecologically/culturally enlightened state of affairs. Let these be encouraged. . . all primitive cultures, all eomunal and ashram movements of all persuasions, etc...it would be best to consider this a continuing 'revolution of consciousness' which will be won not by gund but by seizing the key images, myths, archetypes, eschatologies, and ecstasies so that life won't seem worth living unless one's on the transforming energy's side."

In Theology, History of Religions and the Ecological Crisis, Larry Shiner points out: "In reflecting on celebration and creativity, theology will not simply be trying to revive and enhance a range of experiences now atrophied...We cannot shed our acute self-consciousness but we can reduce its rationalistic acidity. We can learn to value

### FRANKLY SPEAKING

by Phil Frank

play above work, we can learn to sing and dance with life abandon. And in the process we will learn to cherish and cooperate with nature."

In a festival of life and earth, the celebrating, dancing, chanting, and singing that you do spontaneously-inherently grows up from the very breathing, moving, waking, and eating that you do. Energy is so intense that play and work become the same thing, communion happens, and the energy keeps on flowing. There is no waste of energy in this presence of play.

If people could play more with other living things, they would know this.

Conversely, work with the environment must be done with such enthusiasm that it is not

work in the usual, isolated, use of the word.

Our work with the environment must be done with the same feeling the primitive gatherer has had at harvest time.

Knowing that you can't have winter, or a harvest festival without first gathering and harvesting those plants which are now ripe, you work with great enthusiasm, managing the very best you can. When the harvesting is over, you celebrate your work. Dig: You work with enthusiasm so that you may play. Dig: You play with intensity, celebrating your work. It's a time of fullness.

We must work with the environment now, for the time is ripe.

### Overpopulation vs Democracy

by Bobby Beavers

From Dalton Junior College Boulder

The population of our country is now growing at a little  
more than 2 million a year. This compares with 3 million  
in the early 1960's. However, the "baby boom" which fol-  
lowed World War II is now resulting in a boom in weddings.  
As a result, we can look forward to an increase in the  
amount of annual births.

With a present population of approximately 200 mil-  
lion straining our resources, how can we expect to survive  
long enough to see the expected 230 million figure projected  
for 1980? The United States has already become what Wayne  
Davis of the University of Kentucky has described as a  
"desolate tangle of concrete and ticky-tacky of strip-mined  
moonscape and silt-choked reservoirs." Nothing has been  
done to prevent our land from becoming so contaminated  
with pesticides, herbicides, mercury fungicides, lead, boron,  
nickel, arsenic and hundreds of other toxic substances, and  
the near future may prove that it may be unable to sustain  
human life.

Every area of our everyday life and even our lives them-  
selves depend on our finding some solution to the problems  
of overpopulation. However, Congress has so far done noth-  
ing to solve the problems of growth in the population.  
Many of our leaders in Washington have made the mistake  
of believing that technology will completely solve our popu-  
lation problems by producing a better contraceptive, and  
in his July 18, 1969 message to Congress, President Richard  
M. Nixon suggested that providing assistance for parents  
in effectively planning their families would be an answer  
to the question of how to "better assist American families  
so that they will have no more children than they want to  
have." Although technological and educational solutions may  
help us, we must be aware of the fact that some people  
want too many children. Surveys show the average number  
of children wanted by the American family as 3.3.

To prevent the production of children at this rate, our  
political leaders on all levels must, in addition to making  
contraceptives and abortions readily available to everyone,  
take measures to establish a system to put pressure on those  
individuals who produce children and reward those who  
don't. However, we are currently living under a system  
which is the direct opposite of that concept.

Whatever method this country's political leaders use  
to deal with the "population explosion," we must realize  
that they must act for the good of all the citizens of this  
country and for the well-being of all future generations of  
Americans. Monetary, racial and religious factors must not  
be considered when we are shaping the destiny of our coun-  
try. Those individuals who must make the decisions must  
make them with an honest, unselfish belief that they are  
doing what is best for us all.

The shaping of needed legislation will be quite a test  
for our democratic form of government, as a lot of people  
will not like being forced to limit the size of their families.  
However, we must realize that even a democratic system of  
government that fails to meet the needs of a majority of its  
people has no reason for existing.

### Letter to Editor

### 'Rape Of Environment' Creates 'Rotten Mess'

Dear Editor,

The chilling prophesy contained in a popular song by Joni  
Mitchell seems to be coming true:

"They paved paradise/ and put up a parking lot./ They took all  
the trees/ put 'em in a tree museum/ and charged all the people a  
dollar-and-a-half just to see 'em."

Things aren't quite that bad  
yet, but give the good old  
human race time. Because of  
pollution of air, land and water,  
optimistic scientists are giving  
the human race about forty  
years to survive. Pessimistic  
ecologists give us about 15 years.  
It's a bummer either way.  
Something has to be done to  
change the whole damn system.

#### RAY OF HOPE

There is a ray of hope,  
though. A growing concern over  
man's rape of the environment  
seems to be uniting people of all  
political stripes - radicals,  
liberals, conservatives, and  
moderates. The ecology  
movement will probably  
burgeon into the largest protest  
movement this country has ever  
seen. On April 22, there will be a  
nation-wide "teach-in" on the

environment" to protest the fact  
that the water we drink is really  
a broth of H2O and sewage, that  
the rivers are open sewers (signs  
along the Mississippi River warn  
people not to eat their lunch on  
the banks since the river's spray  
contains typhoid germs and  
other goodies), and that the  
skies are being assaulted by  
poison vapours belched from  
smokeslacks. Cough, cough. The  
teach-in participants hope to  
inform people of this insanity  
and to take local action towards  
solutions such as studies of air  
pollution caused by factories in  
their area, debates between  
industrial polluters and  
ecologists, maybe a factory  
takeover or two or three...

#### HELP OFFERED

Pollution is all around us  
and soon it'll be all over us. As a

Libra I can state with authority  
that an environment should not  
only be clean but also  
aesthetically pleasing. Hence, I  
think it would be a good idea for  
students to show their support  
for Mother Nature by  
investigating college and  
industrial pollution in

Carrollton, by inviting ecologists  
to speak on campus, and by  
cleaning out debris like old tires  
and metal from the campus lake  
and woods near Pritchard dorm.  
If anyone else is interested  
in these projects - and they  
should be, because the  
environmental issue really is a  
life-or-death matter, I'll gladly  
try to lend them a hand if  
circumstances allow.

#### FACTS BOGGLE MIND

It's interesting to note that  
early last quarter I was asked to  
write an article for this paper on  
ecology but I declined because  
at the time I didn't know  
anything about the issue. Since  
then I've been finding out all I

can about the debauchery of the  
earth and the facts boggle the  
mind:

-Police in Tokyo must take  
oxygen breaks as a respite from  
city air you can cut with a knife.

-All the fish in the Rhine  
River died because some  
weakminded klutz dropped a  
hundred-pound sack of DDT  
into the waters.

-A river in the U. S. is  
actually a fire hazard because of  
inflammable industrial waste  
slurped on the surface.

-36 people in Japan died  
from clams poisoned by  
insecticides that sifted into the  
ocean.

-School bulletin boards in  
Los Angeles warn against  
strenuous exercise when the  
smog level is high.

-Only a small fraction of  
the DDT sprayed has actually  
fallen to the earth. The  
bulk-billions of tons-remains  
spread throughout planet's air.  
When are we going to wise  
up to this rotten mess?

"This is the way the world  
ends/ This is the way the world  
ends/ This is the way the world  
ends/ Not with a bang, but with  
a whimper."

Shalom,  
Ed Tant  
From The West Georgian

### Announcement

Cardinal Key and the Stu-  
dent Affairs Office are spon-  
soring a program, "A Woman's  
World," on Saturday, April 25.  
The program is designed to ex-  
plore opportunities for women  
in the world of work and to  
encourage women to use their  
knowledge in a worthwhile way  
in their respective communities.

Registration is at 10 am in  
the Camellia Room of the Stu-  
dent Union. At 10:30 there will  
be an introductory session and a  
panel discussion will follow at  
11 pm.

The panel will include women  
from the fields of medicine,  
business, education, journalism,  
and politics.

2) The Valdosta Democrats Cl Mr. Sanders T Body In The Of The Fine At 1:30 P.M.

3) Following His On Ecological Will Be A Re Pine Room C Building.

## 5,000 NATIONAL SCHOOLS PARTICIPATE

Washington—(CPS)—More than 4,000 colleges and 400 high schools will be participating in Earth Day, the Environmental Teach-In, April 22, according to its organizers.

Coordinated by a 12-man staff and financed through contributions and foundation grants, the Teach-In has created interest in ecology action this month in every state. While some campuses have already held teach-ins this month, most of the activity centers around April 22.

Rallies, lectures, dialogues, protests and demonstrations of life style alternatives to continuous degradation of the environment are scheduled in a program similar in tactics to that of Vietnam Moratorium.

According to Teach-In organizers, ecology is not an issue every politician will be able to echo easily. When it comes down to implementing the means to save and rebuild the environment, a lot of people are going to have to pay, they say. And who pays can be political dynamite.

Concerning government eff-

orts so far, Robert Waldrop of the Washington Area Environmental Coalition says, "The Nixon Administration has tried to make the environment its issue. But most of its production has been rhetoric, a couple of councils and some pretty puny programs. They have barely made a step in the right direction."

"Millions of Americans are asking fundamental questions about where this country is going; they want to know why industry continues to dump poisons into our air and water and why the government agencies that are supposed to regulate these industries seem instead to be doing the bidding.

The Interior Department has become a symbol of the government's environmental insanity."

As an example, Waldrop sites that the federal water pollution control administration is responsible for cleaning the nation's waters at the same time the US Geological Survey continues to grind out permits for off-shore

### Ecology Statistics

- Present Population - 3.5 billion; 3.7 babies born every second
- World Population in 30 years - 6 billion
- 140 billion tons of carbon monoxide, soot, and other contaminants added to the air each year
- 8.3 million pounds of carbon monoxide released by automobiles in New York City each day
- Property damage from air pollution in USA estimated at \$13 billion per year
- 700 million pounds of pesticides used each year
- DDT content in the milk of nursing mothers is 2 to 6 times the amount allowed in commercial sales of milk
- 500 million pounds of solid waste pouring into the US waterways each day
- Sonic boom killed 2,000 mink in Minnesota during 1966
- On Thanksgiving Day, 1966, an inversion layer settled above New York City; by the time it dissipated, 168 deaths were directly attributed to it
- By 1985 air pollution will have reduced the amount of sunlight reaching the earth by one-half

## PARTICIPATE

As the Teach-In date nears two senators, known for their anti-pollution stands, have announced new proposals on the subject.

Sen. Edmund Muskie (D-Maine) has announced he will introduce legislation this month for the development and enforcement of standards to control the use of environmentally dangerous subjects in manufacturing products. He included the use in detergents of phosphates which he said adequately controlled at the point of use.

Sen. Gaylord Nelson (Democrat-Wisc.) who provided one of the earliest stimuli for the Teach-In, has called for a National Technology Review Board that will set standards "to anticipate and prevent disastrous environmental consequences from the new products and processes of American Technology."

Nelson also has called for Community Environment Service to create jobs for the poor

## Campaign

WASHINGTON—(CPS)—The Campaign to make General Motors Responsible (Campaign GM) has won its first victory, with the University of Pennsylvania voting to give the Campaign a proxy for its 29,895 shares.

American universities hold at least 1.3 billion shares, say Campaign GM officials, saying that there may be many colleges whose holdings haven't been reported to them.

Other universities are being urged to consider a proxy for their shares.

He included the use in detergents of phosphates which he said adequately controlled at the point of use."

Sen. Gaylord Nelson (Democrat-Wisc.) who provided one of the earliest stimuli for the Teach-In, has called for a National Technology Review Board that will set standards, "to anticipate and prevent disastrous environmental consequences from the new products and processes of American Technology."

Nelson also has called for Community Environment Service to create jobs for the poor

and boost efforts to restore the livability of decaying cities, a \$4 billion a year Transportation for People Fund to finance suitable alternatives to the automobile in the cities and to head of a second round of interstate highway building, and an environmental education system to develop "imaginative" classroom curriculum on the environment.

Nelson, who, with Rep. Paul McCloskey (R-Cal), is co-chairman of Earth Day said the Teach-In will "dramatically change" the social and political structure of the nation.

While Nelson maintains ecology deserves as much consideration as Vietnam has received, many student and Teach-In organizers maintain the issues are inseparable, and both warrant far more attention. Both issues, they say, involve exploitation of the masses by the few with the power—industry and government—and both can be tied to failures of capitalism which rank profits more important than people.

## Campaign GM Wins First Victory

WASHINGTON—(CPS)— The Campaign to make General Motors Responsible (Campaign GM) has won its first victory, with the University of Pennsylvania voting to give the Campaign a proxy for its 29,893 shares.

American universities hold at least 1.3 million shares, say Campaign GM officials, noting that there may be many colleges whose holdings haven't been reported to them.

Other universities are moving to consider the requests for proxies mailed out by the Campaign. A University of Michigan (27,558 shares) Vice President

has endorsed the Campaign, and the Regents there will consider it. In California, University of California 93,775 Regent Fred Dutton has announced he will ask the Conservative Board of Regents to send its proxy to the campaign, and Stanford Trustees have promised to look into the matter.

At Harvard (287,000), and MIT (291,500), University officials are actively considering how to vote their stock, while at many other universities, students are pressuring administrators to support the campaign. Campaign GM is asking the

stockholders to enlarge the GM Board of Directors to include the Rev. Channing Phillips, a black Washington Civil Rights Leader, Rene Dubos, a Rockefeller University professor who is an expert on ecology, and Betty Furness, the former consumer aide to President Johnson.

They are also seeking to establish a committee, with members selected by the Campaign, GM, and the United Workers, to investigate and report on GM's past and present efforts in the fields of pollution, safety, maintenance costs, and minority hiring.

## Mankind's Inalienable Rights

Paul R. Ehrlich  
from The Population Bomb

1. The right to limit our families.
2. The right to eat.
3. The right to eat meat.
4. The right to drink pure water.
5. The right to live uncrowded.
6. The right to avoid regimentation.
7. The right to hunt and fish.
8. The right to view natural beauty.
9. The right to breathe clean air.
10. The right to silence.
11. The right to avoid pesticide poisoning.
12. The right to be free of thremonuclear war.
13. The right to educate our children.
14. The right to have grandchildren.
15. The right to have great-grandchildren.

DeHart said individuals may enter with a partner for the "singles" events and team up with others for the final event.

He said all organizations on campus are eligible to sponsor any number of

Maynard Jackson

teams. He said organizations must sign up in the office of the director of student activities in the Student Union.

Jackson, who is to speak Friday night following the Penthalon, was elected Vice-Mayor of Atlanta last year and ran against Senator Herman Talmadge in 1968, polling 207,171 votes.

Jackson was born in Dallas, Texas, but went to school in Atlanta until he entered Morehouse College at the age of fourteen. He graduated at the age of 18 with a degree in political science and a minor in history.

He graduated from North Carolina Central University with a law degree in 1964 and has been employed as a lawyer in a number of positions since then, including work with the Emory Community Legal Services Center, representing low-income persons in legal matters.

## Board Of Regents Approves 7-Day Meal Plans

by Kay Williams

of Regents recently approved meal plans to begin summer

OPINION

continued from page 1  
"The only true and lasting solution to the problem is in education and in the establishment of a new set of values in the use of science and technology. Today, man no longer thinks of himself as a part of nature; he no longer listens to the land. Man thinks of his work as a political entity rather than as a biological entity," he concluded.  
An organizational meeting of the Students for Sanders Committee will be held Thursday night upstairs in the Student Union from 6 to 9. Students interested in campaigning for Sanders should drop by anytime during those hours so that assignments may be set for meeting hours and specific duties. If a student cannot meet at the specified time, he should contact Howard Freeman or Harry Hancock.

## CORPS OF ENGINEERS RAPE LAND WITH NEW PROJECTS

WASHINGTON-(CPS)- The Army Corps of Engineers is perhaps the most autonomous bureaucracy in the federal government. With 14 district offices, few localities have escaped its tentacles and few politicians have failed to reap election benefits by proposing or endorsing Corps projects for home districts. The average authorization bill for the Corps provides appropriations for at least one-fourth of all districts in election years.

Established in 1802, the Corps constitutes both military and civilian staffs, now totalling about 1100 military and 32,000 civilian. Throughout American history it has engineered major domestic policies. For many years the country's manifest destiny was sculpted by the Corps as it surveyed and carved through natural resources on behalf of the voracious economic development of canals and railroads.

Today, as in recent years, its projects have focused mainly on rivers, harbors and beaches. In the name of enhancing nature's work, the Corps dams, widens, straightens and deepens rivers.

It creates waterways, builds harbors and attempts to preserve some beaches from erosion. The Corps' projects financed by taxpayers, almost exclusively accommodate those special interest groups which support it. Primary beneficiaries of the Corps projects are not the taxpayers. Rather it caters to the special needs and interest of the steel, barge navigation, shipping, utilities, real estate and tourist industries, as well as a particular wealthy farmer or constituent.

Almost impervious to local citizens and conservation groups, the Corps, nevertheless, frames its rationale in public interest phases. Today the Corps talks of flood control, preservation of beaches, hydroelectric power, waterways, water supply, and most recently, recreation and pollution treatment. The dichotomy between the Corps' stated goals and actual works are great and costly.

The corps justifies its dam construction by pointing out that the dams create recreational facilities and dilute pollution. It is well-known, however, that few fish will breed in the still-water areas behind the dams.

Furthermore, pollution is treated more effectively and less expensively at its source, rather than merely flushing it downstream. The current annual Public Works appropriation for the Corps totals \$1.1 billion, with an additional \$1.4 billion going to the Panama Canal, the Water Pollution Control Administration, and Bureau of Reclamation (Dept. of Interior). The Corps is implementing 275 projects (totaling \$13.5 billion before cost over-runs), with an additional 452 projects planned and authorized by Congress.

Current and recent Corps projects provide costly examples of their services to the American public. Bethlehem Steel Company and the Corps are extending the company's property into Lake Michigan on a landfill where a giant steel mill will be located. Minor landscaping is planned. To accommodate the occasional need for emergency water supplies during short periods in dry seasons, the Corps plans to build a series of dams on the Potomac River which will cost \$500 million to \$1 billion. Engineers have recommended to

ITPERCON (Citizens Permanent Conference on the Potomac River Basin) that a cheaper, more effective approach would involve the installation of a supplemental intake and pumping station in the fresh water estuary of the Potomac. The cost of this will be \$10 million. The Corps has subsidized the barge industry by providing waterways making Tulsa and Fort Worth, each 400 miles inland, into seaports. The taxpayers' bill: \$1.2 billion and \$1.1 billion respectively.

The Cross-Florida Barge Canal with its dams will convert more than 45 miles of the Oklawaha River, one of the few remaining wild rivers, into shallow lakes. It will flood 27,000 acres of surrounding forests, totally disrupting the ecology of this area. The value of this vast project is real estate enhancement and recreation. One dam already completed on the Oklawaha is so filled with debris and weeds that chemicals have been used which now endanger all fish life.

A possible solution has been offered recently by the National Parks Association. President Anthony Smith recommended to the President, the CEQ, and Secretaries of the Interior and HEW, that the civilian staff be transferred to the Federal Water Pollution Control Administration (Interior) to concentrate on sewage treatment facilities, and to the National Air Pollution Control Administration (HEW)

## School For Scandal Emphasizes Re

This week the cast of Sheridan's 'The School For Scandal' under the direction of Nelson Hitchcock, began production rehearsals. Written in 1777, Sheridan's masterpiece has retained a style of writing commonly referred to as Restoration Comedy. Emphasis on certain traditional elements of wit, movement, setting, and costume will lend a Restoration aura to the production, which will take place May 13-14.

## GI's Refuse Signing Of Declaration

WASHINGTON (CPS)—"We hold the se states to be self evident, that all men are created equal, that they are endowed by their creator with certain inalienable rights, that among these are life, liberty and the pursuit of happiness." The above portion of the Declaration of Independence was recently read to 252 American GI's in a hall in West Germany, in an experiment conducted by the University of Maryland's research division. The soldiers were asked to sign it if they agreed. Not having been told where the issue came from, the GI's were wary. 75% of them refused to sign the document because they were afraid of subversion.
